AI Driven Staffing to Demand: Predict Future Staffing Needs

Proactively plan and align staff with our AI-driven solution, delivering precise demand forecasting up to 14 days ahead with over 90% accuracy.

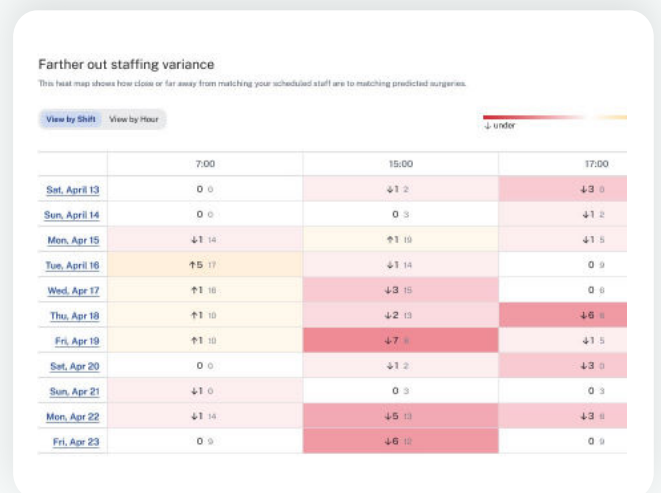

Current operating room staffing practices are predominantly reactive, primarily due to the variable nature of OR schedules which makes it difficult to understand future demand and staffing needs. Understaffing leads to significant challenges, including high labor costs associated with overtime, incentive pay, and the need for temporary staff to make up for gaps in the schedule. Overstaffing leads to wasted resources and unnecessary expenses. In addition, the inability to align staff skills with future demand exacerbate these issues, resulting in low utilization, staff dissatisfaction, and staff turnover.

Introducing Staff Forecast

A New Standard for Accurate “Staffing to Demand”

We understand the challenges of managing a workforce, which is why we created Staff Forecast—the latest innovation for navigating the complexities of staffing.

Staff Forecast accurately predicts upcoming staffing needs and provides actionable recommendations, empowering users to optimize resources and address potential issues before they arise. By minimizing last minute disruptions to the staff schedule, the solution ensures smoother staff planning for everyone involved.

**The only solution
on the market to
provide:**

- > AI-driven demand forecasting that considers future volume, booking patterns, predicted case lengths, and more
- > Instant and essential insights for the next two weeks to pinpoint where and when the greatest staffing variances are going to occur
- > Automatic calculations of staffing variances using real-time case specifics that really matter when making tough staffing decisions, such as staff availability and case type
- > A single tool that integrates all staff-related information from your EHR or WFM into one solution, so you can review all relevant information to make informed staffing decisions
- > Ongoing change management support and recommendations from perioperative experts.

BENEFITS

Reduced labor costs

Enhanced staff satisfaction

Optimized room utilization

Improved patient quality
