

Why Choose Staffing?

OR Staffing has many unique challenges. EHRs, workforce management solutions, and learning management systems provide scheduling and staffing tools, but are piecemeal solutions that result in missed opportunities, excess overhead, increased costs, and impact to patient care. Staff are burnt out working in an outdated model that does not support the complexity of aligning staff to OR demand.

Today's piecemeal staffing solutions fail to deliver

Workforce management solutions create staff schedules several weeks in advance

No data-driven insight into predicted demand on the day of surgery, or alignment with staff availability and competencies

EHRs assign staff to ORs for the day and document their case participation

Staff skills and experience “invisible” during assignment, requiring time-consuming follow-up or best guess at appropriate assignment

Break coverage requires a separate, time-consuming process to ensure compliance

Staff communication of assignments is an extra manual task that's a scramble to complete before the day starts

Learning management systems capture orientation status and professional development opportunities

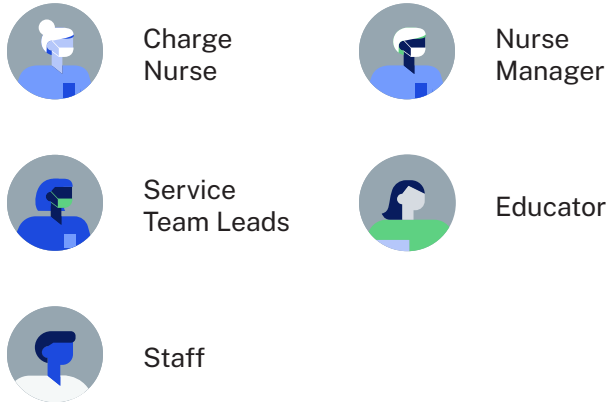

Missed development opportunities prolong shortages of trained staff and lead to staff dissatisfaction and turnover

iQueue Staffing transforms manual scheduling and staffing processes into intelligent and strategic resource allocation

Users

LeanTaaS Solution

Through seamless integration with your workforce management solution and EHR, the Staffing module within iQueue for Operating Rooms' suite of tools predicts demand-driven staffing needs based on future volume as well as competencies and preferences of available staff.

The solution also provides daily assignment recommendations, taking into account the entire OR schedule and roster when matching staff to rooms. Recommendations will not only consider experience and preference but also aim to enhance staff skills and competencies providing you with more cross-trained staff.

Results

Equitable Staffed Capacity Created

- Increased schedule stability
- Cross trained staff
- Optimal use of available staff
- Appropriate use of overtime
- Increased surgeon & staff satisfaction
- Better performance outcomes

Future Day Planning

Day of Planning

Real-time assignment availability across nursing leaders, staffing office and staff
